## INTERNATIONAL CONFERENCE TECHNOLOGIES OF GLOBALIZATION DARMSTADT, OCTOBER 30-31/2008

Presently (re-)shaping social life as well as economics and science, the effects of globalization are in their turn – and in manifold ways – related to and in fact highly dependent on technology. The first International Conference of the DFG Graduate School \*Topology of Technology\* seeks to explore in greater detail and from a deliberately interdisciplinary angle the role(s) and function(s) of world-embracing information and communication technologies, transport and computing facilities in the global age.

In plenary discussions and five interdisciplinary streams the conference

- inspects the novel ways in which global(ized) technologies enable mobility (and require new modes of managing these) / STREAM 1
- attempts to clarify how newly developed technologies contribute to and assist the currently observable developments in the particular field of engineering and, more generally, in labor distribution and organization / STREAM 2
- traces the influence of these technologies on the re-definition of \*the local\* against the backdrop of \*the global\* / STREAM 3
- gives space to historical considerations aiming at the disclosure of precursors of technologyenhanced globalizing tendencies / STREAM 4
- discusses the world-wide efforts of controlling and improving body movement(s) for the target group of old-age people in sport science / kinesiology and perceptual computing. / STREAM 5
- 1 MANAGING MOBILITY

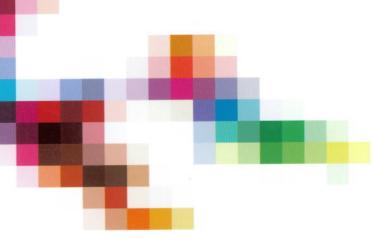

\* INFORMATIZED WORK: TOWARDS A NEW DIVISION OF LABOUR?

3 GLOCALIZATION IN THE PRODUCTION OF BUILT ENVIRONMENT

GLOBALIZATION REVISITED: WORLD-EMBRACING TECHNOLOGIES

IN A HISTORICAL PERSPECTIVE

5 AGING AS A GLOBAL ISSUE - A CHALLENGE FOR TECHNOLOGY AND SOCIETY
