

Results „UGoS“ Survey with Enterprises, Markets, Schools, and Buisnesses

Jakob Lederer

Institute for Water Quality, Resource and Waste
Management

1st UGoS Stakeholder Workshop

October 8th 2010

Considered establishments

1. Enterprises (retailer, wholesaler, grinding mills, breweries, workshops, garages)
2. Schools
3. Hospitals
4. Industries

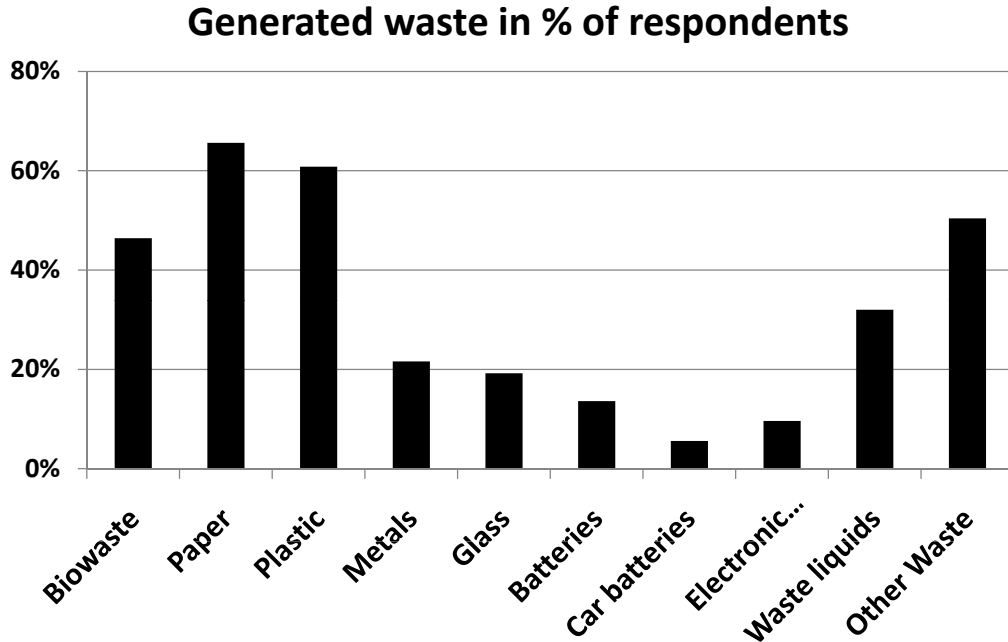

= in total more than 130!

Example: Clothes Retailers

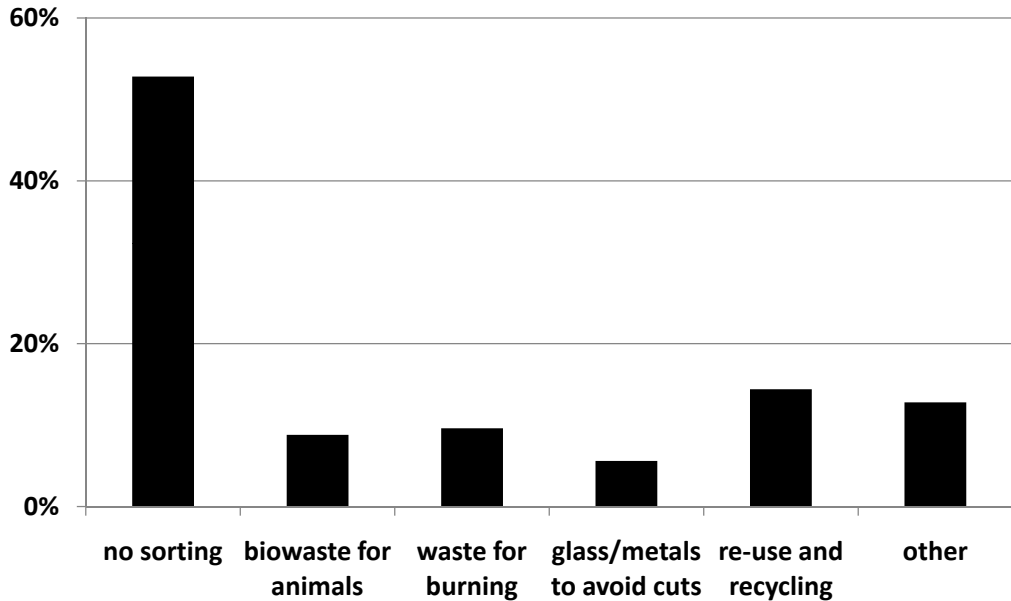

Some Results

1. Wastes usually generated

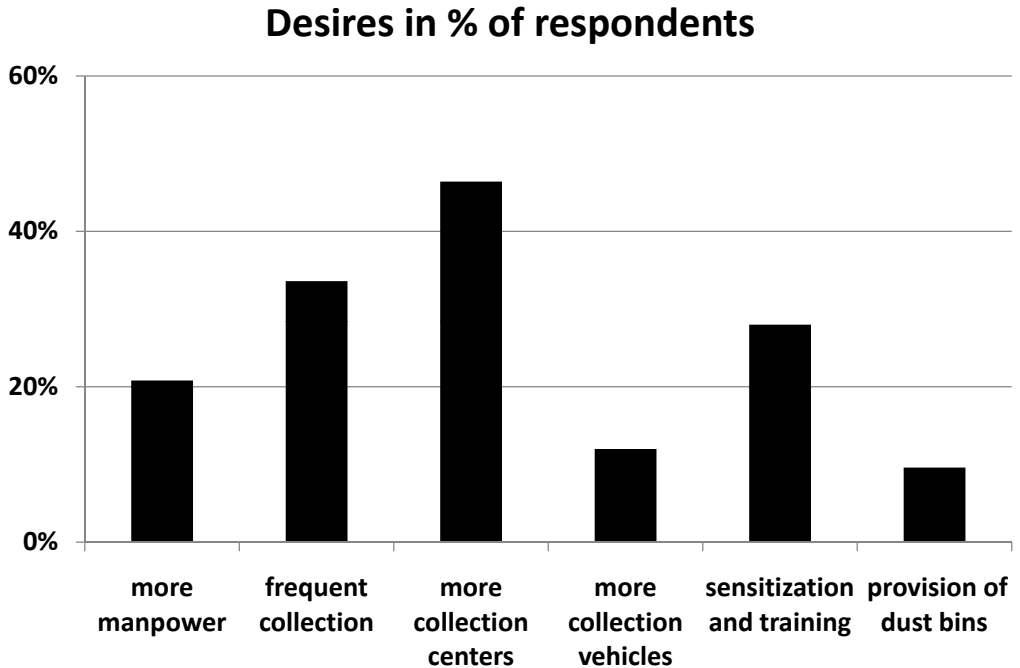

2. Waste Sorting

Waste sorting in % of respondents

What improves solid waste management?

Summary of results

- **Many different kinds of waste produced**
- **Waste collection**
 - Street kids serve 20 % of interviewed establishments
 - Over 20 % of interviewees pay for waste disposal
- **Recycling and re-use of waste**
 - Banana peels, grinding residues for animal food
 - Metal waste sold to scrap dealers
 - Paper, cardboard, polythene bags for lighting fire

Summary of results

■ Hazardous and problematic wastes

- Batteries are disposed with other wastes
- Wastes from butcheries and restaurants attract flies and generate bad smells
- Infectious hospital wastes are usually burnt in a barrel, small incinerator, or open burnt

■ Suggestion from health centers and clinics

- Solid waste is a major threat to human health
- Waste disposed in town should be removed as soon as possible

- **No investigation so far**
- **Generally: Industries are important for jobs**
- **But contribute also to major pollution, if not producing „clean“**
- **E.g. tannery waste:**
 - Contains pollutants, like chrome
 - Should be treated and disposed safely
 - Should not be re-used in agriculture!
- **Further investigation necessary**
- **Goal: Cleaner Production!**
