

# Results „UGoS“ System Description

Jakob Lederer

Institute for Water Quality, Resource and Waste  
Management

1st UGoS Stakeholder Workshop

October 8th 2010

# Sources of information

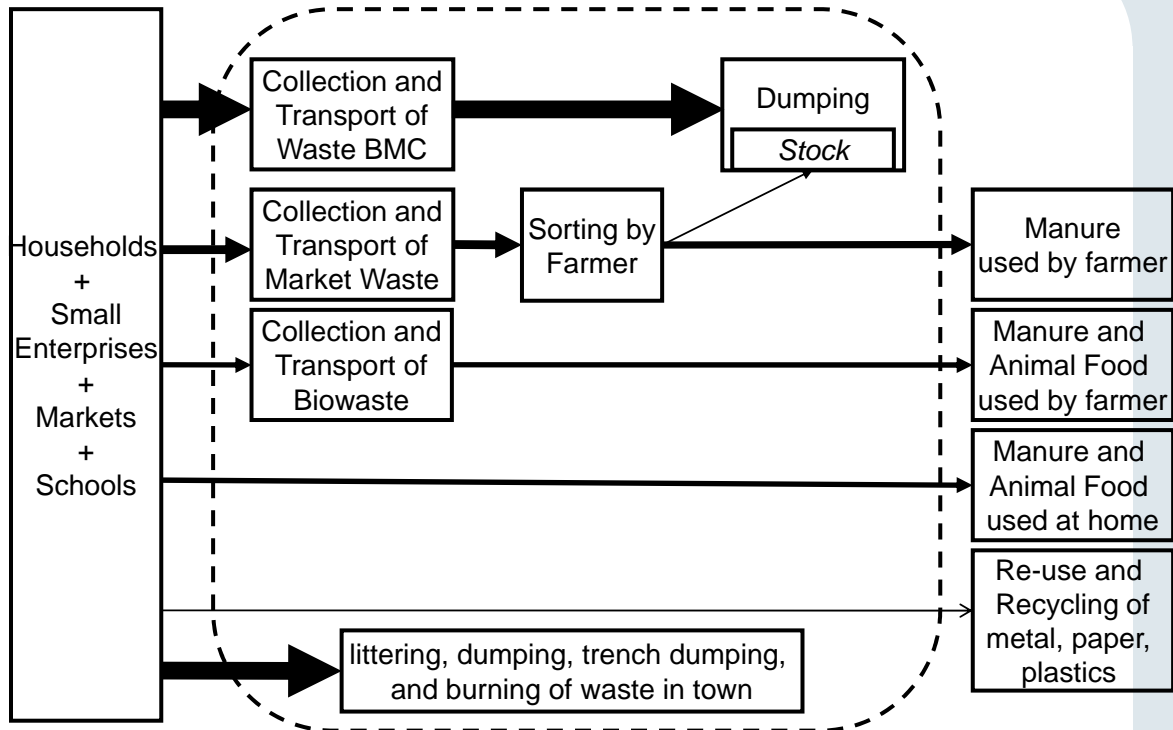

1. Survey with households
2. Survey with other establishments
3. Survey with farmers
4. Interviews

**=> What do we do with this information?**

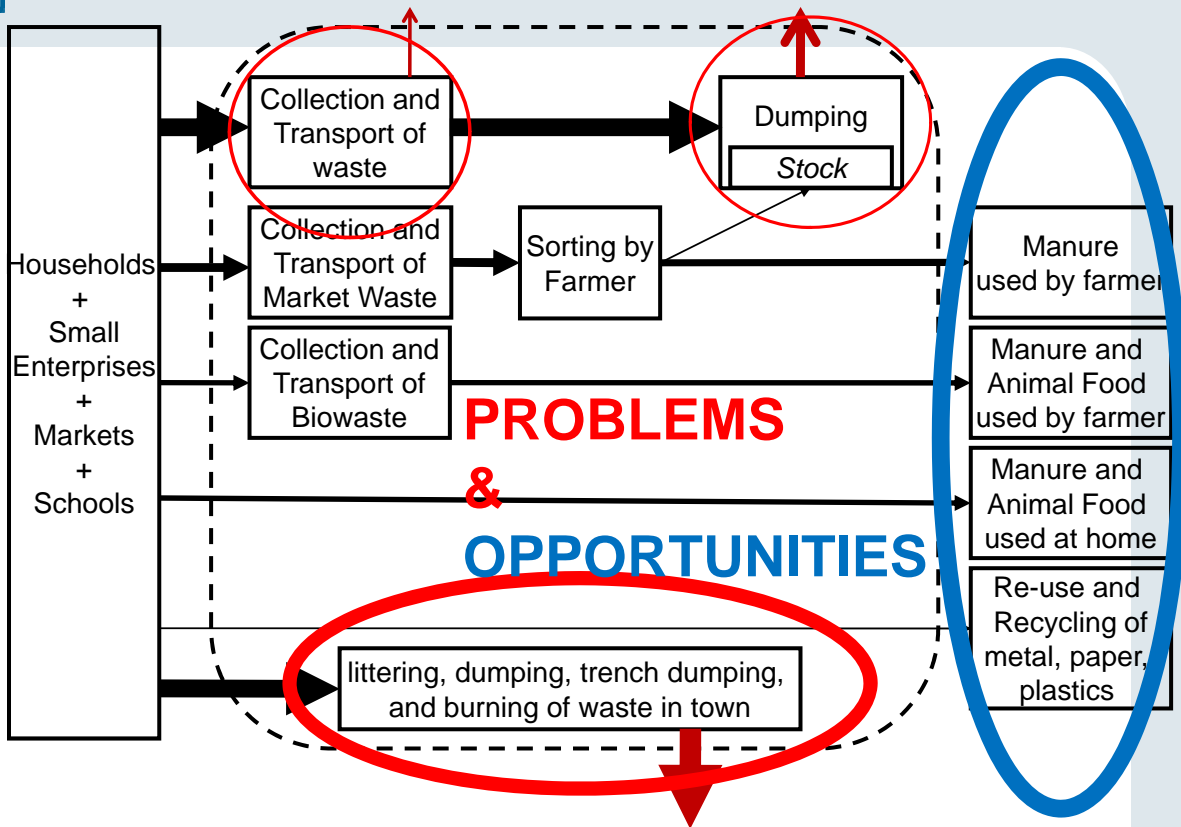

# 1. System description

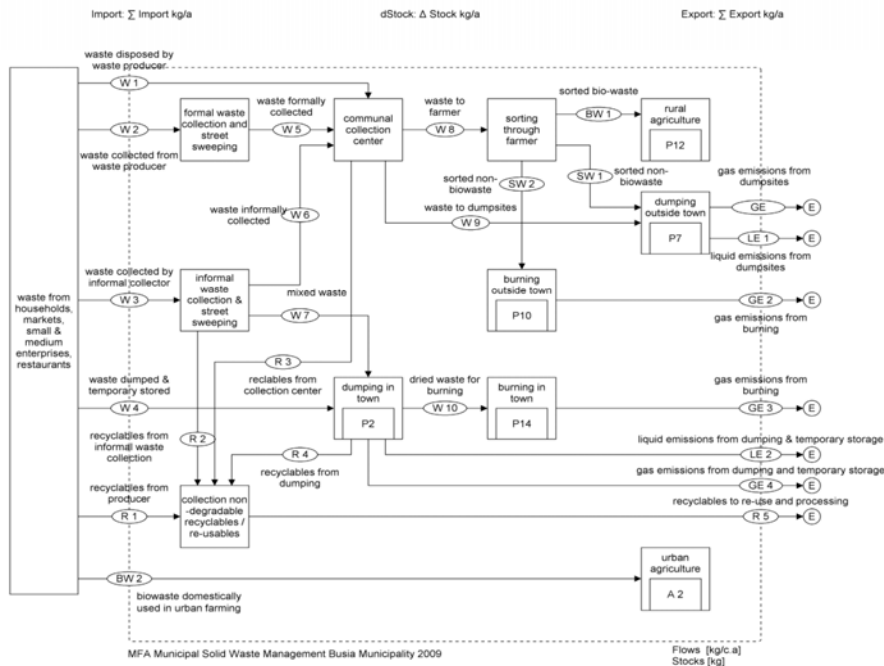

# SOLID WASTE MANAGEMENT IN BUSIA

## 2. System Analysis

# Solid waste management in Busia

# Summary of results

- **Most wastes generated are bio-waste**
- **Improvement compared to 10 years ago**
- **Most stakeholders want more improvement**
- **Many stakeholders are willing to participate in the improvement, but not all of them**
  - some think it is not important
  - some simply have no time or no money
- **Many different stakeholders**
  - Authorities, NGOs, waste producers, waste workers, informal waste collectors, farmers, scrap and recycling material dealers, street kids, .....

## ■ Hazardous wastes

- Not excessively generated
- small but potentially dangerous
- but, non-hazardous wastes can also be harmful
- Industrial waste? No data

## ■ Use of manure by farmers

- Some farmers are using manure from solid waste
- However, manure quality, awareness, financial ability is a problem

## ■ Other waste recycling (metal, plastic)

- Small, also because most waste is biowaste
