The Smartcity - an ecological symbiosis between nature, society and the built form - is the innovative response to contemporary problems from one of the world’s leading urban design and architectural thinkers. Addressing the problems of unchecked city growth, the idea of the Smartcity questions whether we could begin to live once again from first principles, focusing in on the inhabitants of the city.

The holistic construct of the Smartcity is developed through a series of international case studies, some commissioned by government organisations, others speculative and polemic. Reframing the way people think about urban green space and the evolution of cities, CJ Lim explores how the reintegration of agriculture in urban environments can cultivate new spatial practices and social cohesion in addition to food for our tables.

Representing an emerging architectural voice in matters of environmental and social sustainability, “Smartcities and Eco-warriors” is a long overdue treatment of the subject from a designer’s perspective, and is essential reading for practitioners and students in the fields of architecture, urban planning, environmental engineering, landscape design, agriculture and sociology. An inspiration to government agencies and NGOs dealing with climate change, it also resonates with anyone concerned about cities, energy conservation and the future of food.

Our International series of open lectures covers a wide range of ideas in architecture, design, technology, history and theory. The series totals some 25 lectures in a typical year and ranges from such personalities in the architectural world as Bernard Tschumi, Zaha Hadid or Daniel Libeskind, to the first public lectures by talented newcomers. It also includes lectures from young and established scientists, engineers and makers looking at the ways in which architectural worlds are conceived, made and subsequently perceived by others. Also addressed are a wide range of issues concerning related disciplines such as art and art theory, philosophy and critical theory, urban geography, cultural studies, journalism and criticism, with speakers such as Alain de Botton, Jean Baudrillard, Patrick Keiller and Mark Wigley.

The International Lecture Series is supported by The Fletcher Priest Trust
